

3 Questions to Ask Before You Ask Claude*

*or ChatGPT, Gemini, etc.

Q: Is it TRUE?

A: NO.

Generative A.I.
hallucinates.

Search engine
"A.I. overviews"
frequently produce
incorrect answers.

A.I. chatbots prioritize
telling you
what you want to hear
over telling you
the truth.

Q: Is it KIND?

A: NO.

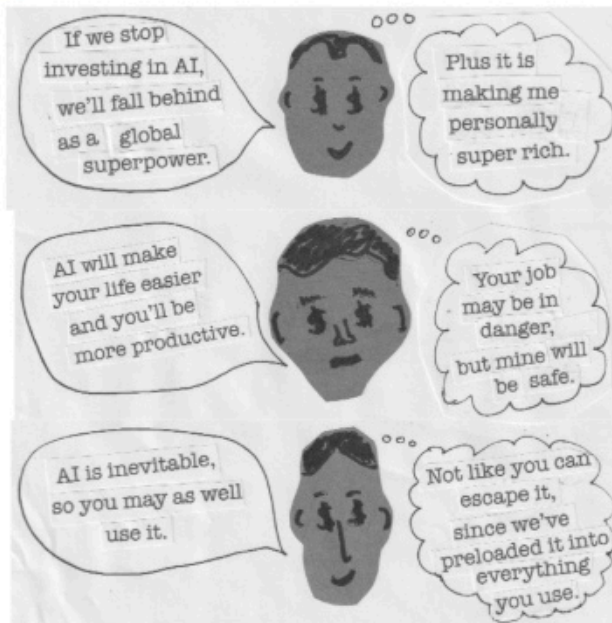

Tech companies stole
copyrighted material
to train chatbots.

Data centers guzzle
energy & water,
often in vulnerable
communities.

Energy utilities are
doubling down on
gas production
(instead of solar or wind)
to supply data centers.

Q: Is it NECESSARY?

A: Depends who you ask.

A.I. executives say
A.I. needs to be CONTROLLED
before it destroys humanity.

But they're not doing it
themselves.

No one company
wants to fall behind
all the other companies.

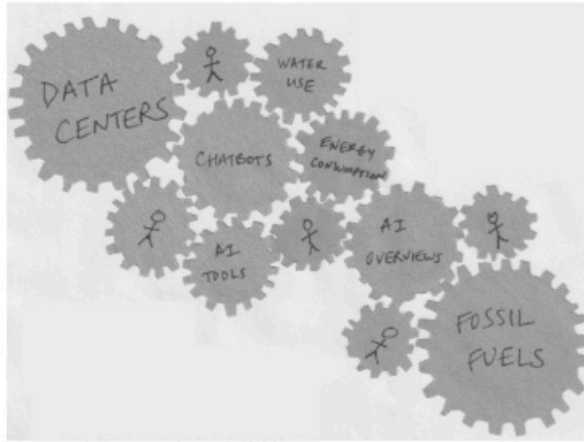

Falling behind=less \$\$\$\$\$

They say CONGRESS should do it.

Meanwhile A.I. companies
funnel MILLIONS OF DOLLARS
to back candidates
who are sympathetic to A.I.

(Source: "A.I. Groups Are Spending Millions to
Influence the Midterms": NY Times, Sept. 29, 2026)

It's hard not to feel like
a cog in the machine

But YOU get to decide

IF, WHEN &

HOW

to use
generative A.I.

You can...

... remove A.I. tools from
your computer and phone's
operating systems

(Not sure how? Go to consumerreports.org
& search "how to turn off AI tools")

... turn off A.I. overviews
on search engines

(or use one without A.I.
like noai.duckduckgo.com)

... get info from
trusted sites
(like .org and .edu)
rather than a chatbot

... tell other people
about the choices
you're making & why

... VOTE for candidates
who share your values

Like this zine?

Leave it somewhere
for others to find.
